

WELCOME ONTO OUR DATA SCIENCE TRAINEESHIP!

This document will explain
how your certified courses will
be delivered to you and your
journey to becoming a
professional in the industry.

CERTIFIED
DATA SCIENTIST

    $loop++;  
}
```

This package will give you all of the accredited courses, hands on experience, certifications and portfolio work required for us to place you into a Data Science role with a starting salary of £25K-£45K.

You will have up to 1 YEAR to complete the traineeship in its entirety.

AVERAGE STUDY TIMES (STEP 1 - 4)

Full time study:

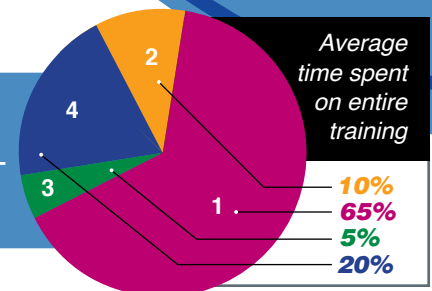

4 - 5 Months (30 hours per week)

Part time study:

8 - 10 Months (15 hours per week)

4 SIMPLE STEPS

The traineeship is completed in 4 simple steps, which consist of; Data Science Career Training, CompTIA Data+ and Official Exam, and Practical Projects.

Step 1

FULL DATA SCIENCE CAREER TRAINING

You will begin your data science journey by studying a selection of industry-recognized courses that will take you from beginner level all the way through to being qualified to work in a junior Data Scientist role. Through the interactive courses, you will gain knowledge in Python, R, Machine Learning, AI, and much more.

You will also complete mini projects to gain practical experience and test your skills while you study. This step will fully prepare you for the professional projects that you will undertake in step 4 of this process.

At the end of this step, you will complete a short online multiple-choice exam to showcase your understanding of the courses before moving on to step 2.

Step 2

COMPTIA DATA+

CompTIA Data+ is an early-career data analytics certification for professionals tasked with developing and promoting data-driven business decision-making.

It teaches Data Mining, Visualization, Data Governance & Data Analytics.

In any industry, gaining official certifications is very important in the recruitment process.

Therefore, this globally recognized certification will enhance your CV and make you stand out from the crowd.

Step 3

OFFICIAL EXAM

The CompTIA Data+ exam will certify that you have knowledge and skills required to transform business requirements in support of data-driven decisions through mining and manipulating data, applying basic statistical methods, and analysing complex datasets while adhering to governance and quality standards.

The exam is 90 minutes long and can be sat either in your local testing centre or online.

Step 4

PRACTICAL PROJECTS

Now that you have completed your theory training and official exams, you will be assigned 2 practical projects by your tutor. The projects are the most important part of the traineeship as it will showcase to employers that you have skills required to work in a data science role.

The projects will use real world scenarios where you be utilising all of the skill that you have learned throughout the course. Whilst you are progressing through the projects, you will have the ongoing support from your personal tutor. Once both projects have been completed and given the final sign off, you will have completed the traineeship and will be ready to move onto the recruitment stage.

TUTOR SUPPORT

Throughout your training you will have your own personal Tutor, should you have any questions regarding your learning just email them and they will be happy to help. Your assigned Tutor's email address is within the booking confirmation & logins email sent to you on signing up.

You can study through the video tutorials at your own pace, in your own time using a **COMPUTER** or **LAPTOP**.

FULL DATA SCIENCE CAREER TRAINING

STEP 1

The online courses will give you all of the theory that you will require to move into your new role. The courses will be available 24/7.

1 Data Science Foundations

2 Python

3 R

4 Ai Machine Learning

5 SQL

6 Data Analytics

7 Tensor Flow

8 Feature Engineering

Here you can find the outline of each course that you will study on the Data Science Traineeship. There will be a wide range of

languages and coding necessities you will be learning during this phase with a lot of emphasis on the practical application.

All of which will be available to you 24/7 so you can complete the training alongside any social/work commitments you have.

1. DATA SCIENCE FOUNDATIONS

Data Science is one of the most in-demand skillsets that companies are constantly hiring for. This Skill Path will teach you the basics of cleaning, analysing, and visualizing data. You will learn industry-standard languages and libraries including Python, pandas, and SQL. Along the way, you will create real-world projects to practice and demonstrate your analytics skills.

2. PYTHON

Python is a general-purpose, versatile, and powerful programming language. It's a great first language because Python code is concise and easy to read.

Whatever you want to do, python can do it. From web development to machine learning to data science, Python is a great language to know.

3. R

R is a powerful programming language built specifically for data science by actual data scientists. In this Skill Path, you will learn to clean and process data, build statistical models, and create meaningful data visualizations.

Along the way, you will use real-world data to demonstrate your skills by producing analytics reports.

4. AI MACHINE LEARNING

Machine Learning and AI are at the forefront of some of the most exciting modern technologies. From fraud detection systems to dating apps, machine learning engineering is changing the world. Joining this movement and becoming a Machine Learning Engineer requires a solid foundation in data literacy, programming, mathematics, statistics, and visualization. This Skill Path is that foundation.

5. SQL

All companies use data now, and most of it is stored in databases. In this Skill Path, you will use SQL queries to create databases, pull data from databases, and analyse the results. You will practice your skills with real-world marketing and user analysis case studies, and prepare for technical interviews. Plus, now you can build your prompt engineering skills and get hands-on experience writing, testing, and refining prompts directly in the course.

6. DATA ANALYTICS

Companies are looking for Data Scientists who can manage data, get results, and drive decision-making. Analytics is all about using data to answer questions, and this Career Path will teach you just that.

You'll learn how to analyse data, build dashboards, and deliver impactful reports. Along the way, you'll build portfolio-worthy projects that will help you get job-ready.

7. TENSOR FLOW

Deep learning is a cutting-edge form of machine learning inspired by the architecture of the human brain, but it doesn't have to be intimidating.

In this Skill Path, you will use TensorFlow and Keras to train, test, and tune neural networks for regression and classification. Along the way, you will demonstrate your skills by building actual models with real data.

8. FEATURE ENGINEERING

A machine learning model is only as good as the data it learns from. Feature Engineering helps ensure data quality by scaling, normalizing, and transforming raw data before using it in a machine learning model.

In this Skill Path, you will learn to safeguard data quality, turn attributes into features, and verify that your data meets the assumptions of the model you want to train.

PLEASE NOTE:

Refer to the "DATA SCIENCE COURSES" pdf attached to the Booking Confirmation email for links to access these courses

COMPTIA DATA+

STEP 2

In this step, you will be given access to the CompTIA Data+ course to complete on a different learning platform.

CompTIA Data+ is an early-career data analytics certification for professionals tasked with developing and promoting data-driven business decision-making. It helps better analyse and interpret data, communicate insights and demonstrate competency.

OFFICIAL EXAM

STEP 3

The CompTIA Data+ exam will certify that you have knowledge and skills required to transform business requirements in support of data-driven decisions through mining and manipulating data, applying basic statistical methods, and analysing complex datasets while adhering to governance and quality standards.

The exam is 90 minutes long and can be sat either in your local testing centre or online.

PRACTICAL PROJECTS

STEP 4

Now that you have completed your theory training and official exams, you will be assigned 2 practical projects by your tutor. The projects are the most important part of the traineeship as it will showcase to employers that you have skills required to work in a data science role. The projects will

use real world scenarios where you be utilising all of the skill that you have learned throughout the course.

Whilst you are progressing through the projects, you will have the ongoing support from your personal

tutor.

Once both projects have been completed and given the final sign off, you will have completed the traineeship and will be ready to move onto the recruitment stage.

CV REVIEW

You will need to send us in the latest copy of your CV. It will be completely reformatted, proof read, re-worded and updated with all of your new skills and certifications. We will look at what you have done in any previous roles/education and will be **TAILORED TO THE DEVELOPMENT INDUSTRY**. This will be done within 3 working days.

JOB PLACEMENT

We have helped place hundreds of students all across the UK into various types of entry-level positions within development. The spectrum of companies can range from large multinational organizations right the way down to small start-ups. Your dedicated recruitment consultant will source you interviews

through our network of partner companies and companies hiring in your area.

Your consultant will provide you with interview prep and advice regularly throughout the process. You will have unlimited interviews until you are successfully placed into your new role.

RECRUITMENT CONSULTATION

One of our recruitment consultants will get in touch with you to have a job consultation to discuss with you your previous work experience and job placement requirements such as location you are willing to work.

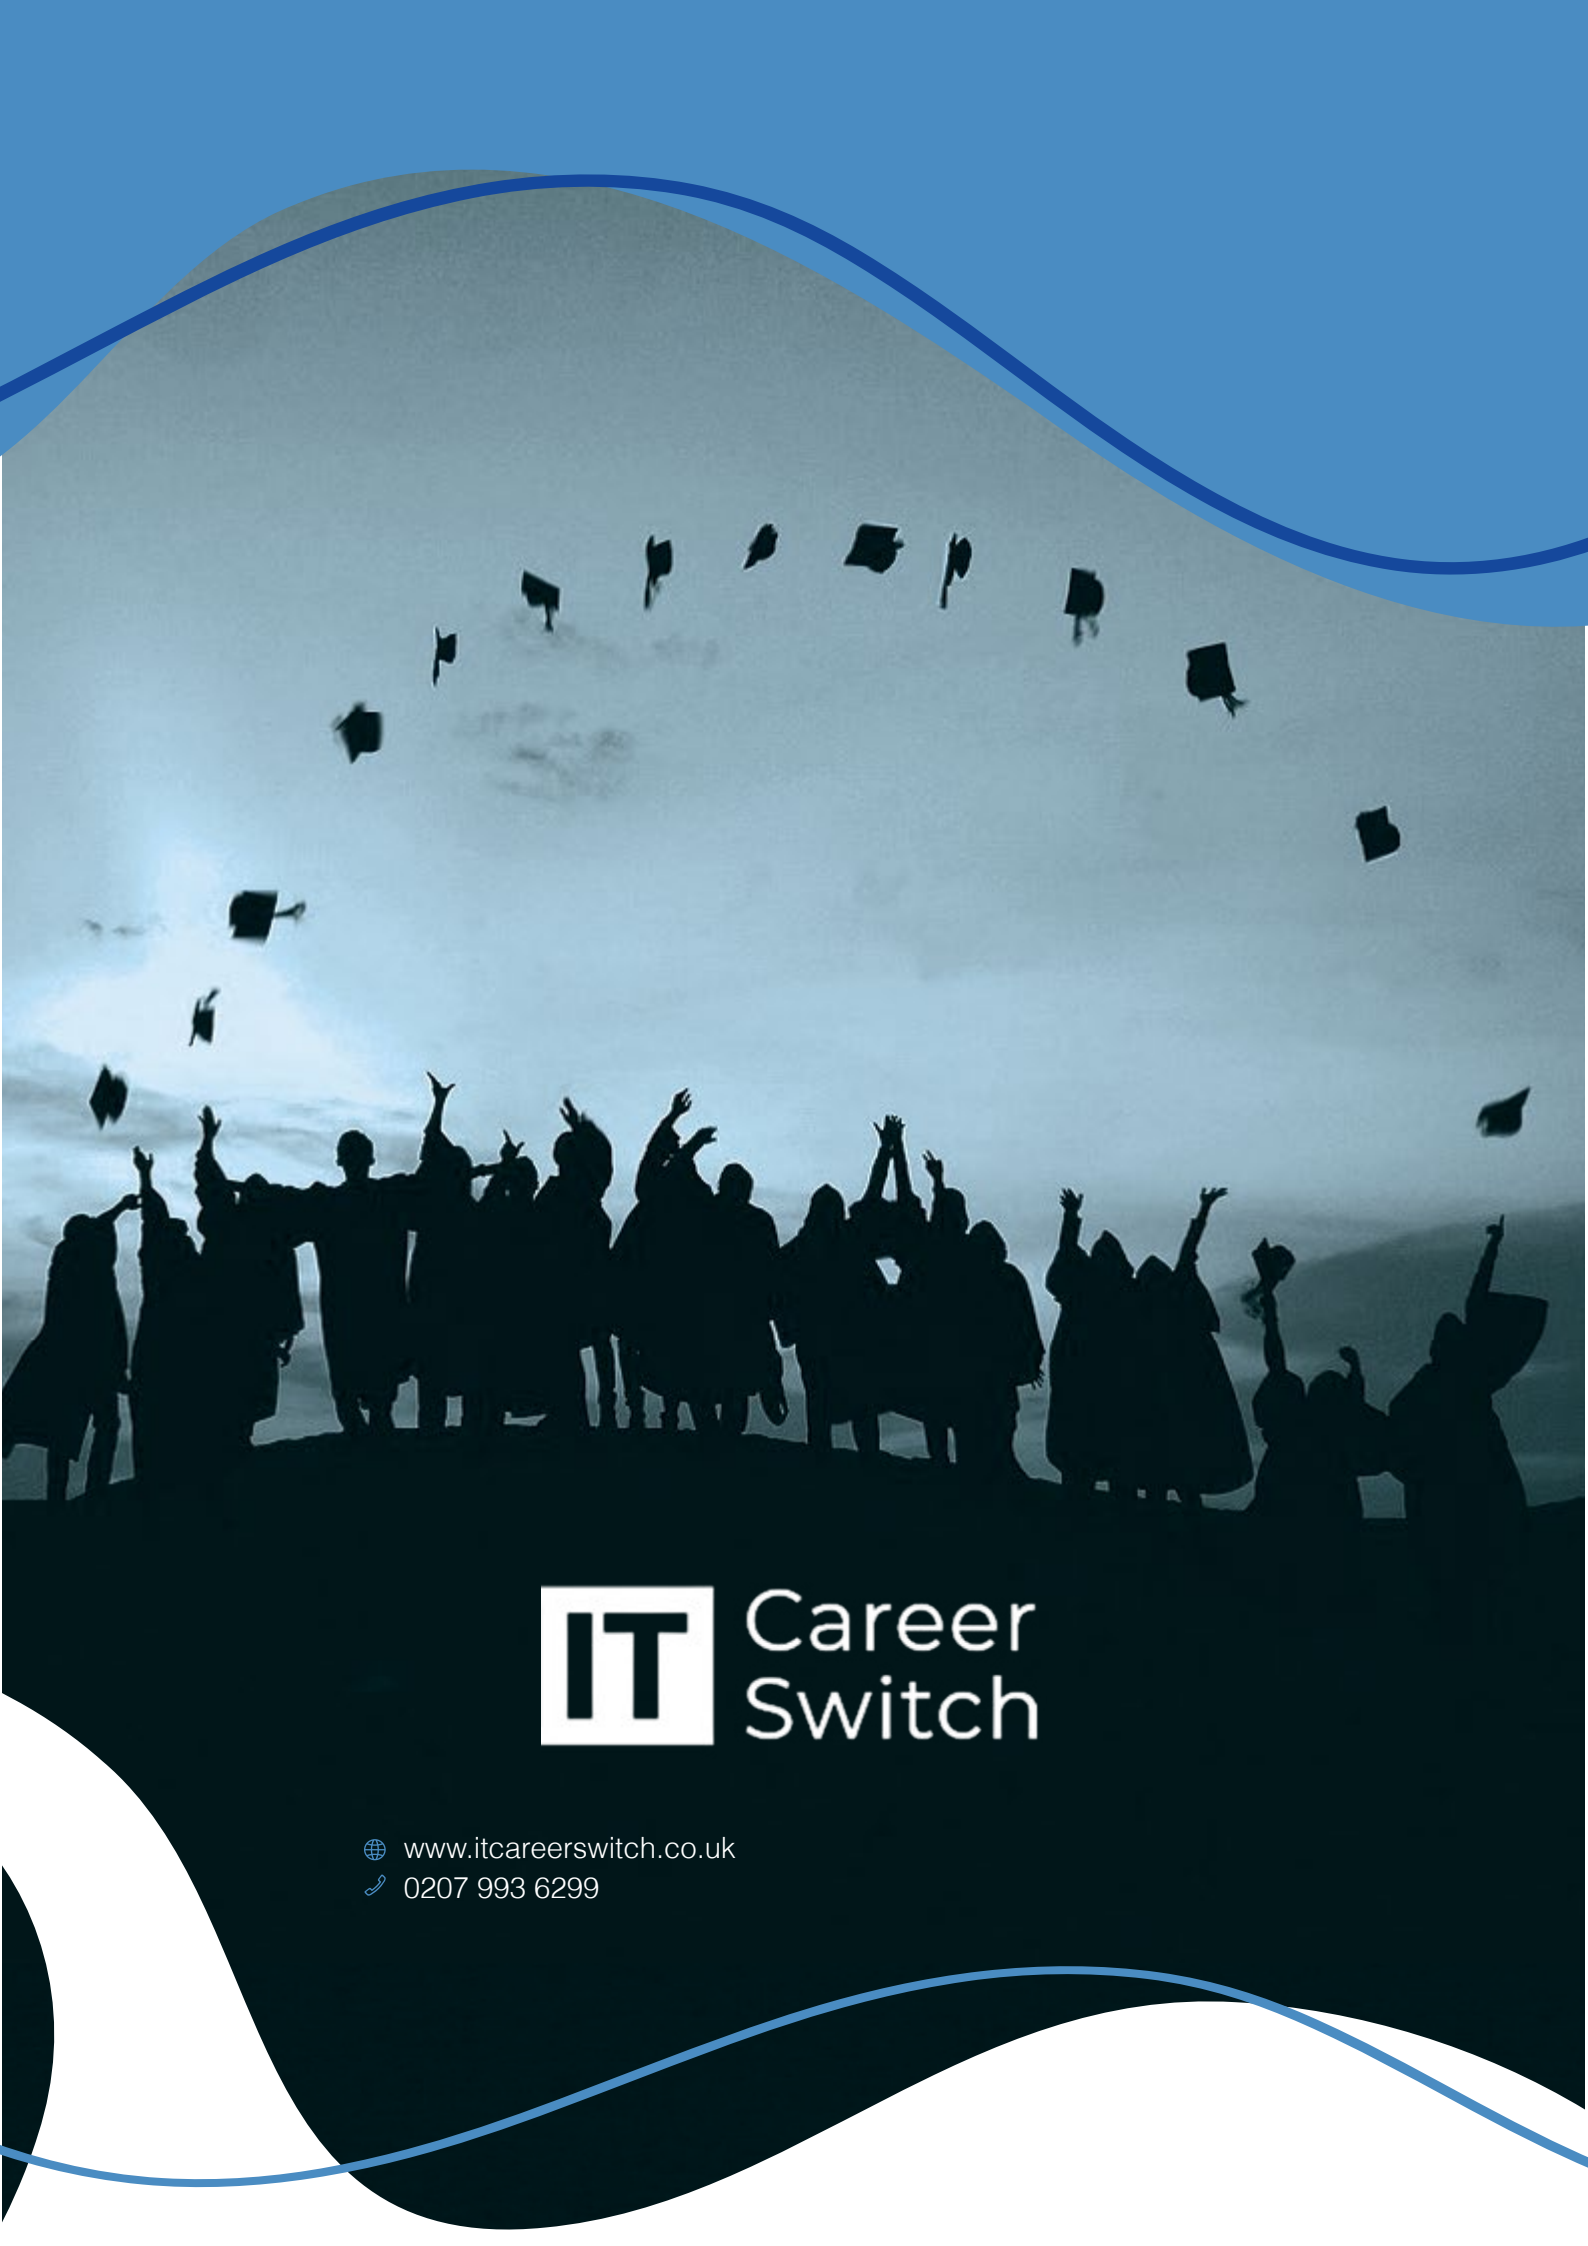

MONEY BACK GUARANTEE

We are so confident in our ability to place you into a job upon completion of the training, so we offer a money back guarantee.

The average time for our candidates to be placed into a role is 4-6 weeks after completion. However, if we cannot place you into a role within 12 weeks of you completing the training, we will **REFUND 100%** of your course fees back to you.
